AB - J58113275 Pressure-sensitive adhesive compsn. contains (I) steroid
skeleton-contg. substances in the form of clathrate cpd.

- Pref. (I) include hydrocortisone, estrone, digoxin, progesterone. For
formation of clathrate cpd. of (I), cyclodextrins where glucose units
of integer times have combined with each other to form rings are used.
Gamma-cyclodextrin comprising 8 glucose gps. and having a hollow of
8.5 angstroms inner dia. and are 7.0 angstroms in depth; and
beta-cyclodextrin comprising 7 glucose gps. and having a hollow of 7.0
angstroms inner dia. and 7.0 angstroms in depth are pref. used.

Clathrate cpds. are formed from (I) and beta-cyclodextrin in a molar
ratio of 1:2 ((I) : cyclodextrin) or from (I) and gamma-cyclodextrin
in a molar ratio of 2:3 (in Component 1/cyclodextrin). The clathrate
cpds. have good solubility, discharge property and stability.

- The adhesive compsn. has good stability and high pharmacologic action,
being used for the mfr. of adhesive tape for medical use.
